Mobile IP Architecture & Protocols

Coverage: Mobile Node (MN), Home Agent (HA), Foreign Agent (FA), Home Address (HoA), Care-of Address (CoA), Tunneling & Triangle Routing

Prepared by: Prof. Anju Markose | Assistant Professor, Dept. of Computer Science & Engineering | VJCET

1. Mobile IP Entities & Tunneling

- MN retains permanent Home Address (HoA) while acquiring temporary Care-of Address (CoA).
- Home Agent intercepts packets using Proxy ARP and tunnels them via IP-in-IP encapsulation to Foreign Agent.

2. Triangle Routing

- Inefficient triangular path solved via Route Optimization (CN caches CoA).

■ KTU University High-Yield Exam Questions

- Q: Explain Mobile IP entities, registration, and IP-in-IP tunneling. (8 Marks)
