Multicast Routing Protocols & IGMP

Coverage: Multicast Addressing (Class D), IGMP Host-Router Membership, Source-Based Trees vs Group-Shared Trees, RPF, PIM-DM vs PIM-SM

Prepared by: Prof. Anju Markose | Assistant Professor, Dept. of Computer Science & Engineering | VJCET

1. Multicast Fundamentals & IGMP

- Class D: 224.0.0.0/4. IGMP manages local host group memberships.
- Reverse Path Forwarding (RPF) prevents multicast loops.

2. PIM-DM vs PIM-SM

- PIM-DM: Flood & Prune (Source-based tree). PIM-SM: Explicit Joins to Rendezvous Point (Shared tree).

■ KTU University High-Yield Exam Questions

- Q: Explain PIM-DM and PIM-SM multicast routing. (8 Marks)
